INFORMATION-BASED INVERSION AND PROCESSING WITH APPLICATIONS

Inversion includes both seismic field data and well data, where well data serves to add the high frequency below the seismic band and to constrain the inversion. Well logs are first conditioned and edited to ensure there is a suitable relationship between impedance logs and the desired properties.

Under some conditions, inversion interferes even with featural processing and the recognition of other mono-oriented stimuli (e.g. the recognition of cars, even by non-experts). Thus, the demonstration of an inversion effect by itself does not constitute evidence for a particular type of face processing or that the processing is different for faces and other objects.
